SUZANNE DUKET

Front End & AI-Native Development
Seattle, WA | (310) 998-7275 | suzanne.duket@gmail.com

SUMMARY

Front end engineer and former Engineering Manager with over a decade of experience building user-facing products at Amazon and Reddit. I work where product and engineering meet: hands-on in the codebase and engineering toolchain, while owning outcomes, turning ambiguity into clear specs and prioritized work, and keeping product, design, QA, and ML partners aligned. I build with AI-native workflows, using Claude Code to take ideas from spec to prototype to working product.

CORE STRENGTHS

- **Technical fluency:** Over a decade of hands-on web development in React, TypeScript, and JavaScript, with daily fluency in repositories, version control, code review, and production support.
- **AI-native delivery:** Build and iterate with Claude Code for full-stack feature development and bug fixing; partnered with ML teams to ship AI-powered product features.
- **Outcome ownership:** Led teams of up to nine engineers, accountable for roadmap alignment, delivery health, and shipping features that met business and user goals.
- **Ambiguity to specs:** Translate business requirements and loosely defined problems into technical solutions, API contracts, and executable, prioritized work.
- **Cross-functional partnership:** Long track record partnering with Product Management, UI/UX Design, QA, and ML teams.

INDEPENDENT PROJECT

Creator — TavernTalk | www.taverntalk.games

- Designed and built TavernTalk, a website that takes notes for tabletop RPG sessions, end to end using Claude Code as the primary development workflow.
- Owned the full product loop solo: defining the problem and users, writing specs for AI-assisted implementation, prototyping rapidly, and iterating on the experience.

PROFESSIONAL EXPERIENCE

Engineering Manager — Ad Creative Management Team *January 2025 – September 2025*
Reddit | Remote

- Owned delivery for a full-stack team building tools that help advertisers automate ad creation, aligning roadmap and goals with Product Management.
- Partnered with ML teams to ship AI-powered features, including context-aware AI-generated ad headlines, turning model capabilities into usable product experiences.
- Drove development environment and tooling quality initiatives with peer managers to improve engineering workflow.
- Screened, interviewed, and hired several successful engineers and contractors.

Engineering Manager — Amazon Photos Sharing Team *September 2020 – November 2024*
Amazon | Seattle, WA

- Led a team of nine full-stack engineers delivering mobile app features and services for Amazon Photos, accountable for delivery health and outcomes.
- Translated stakeholder and business requirements into technical solutions and priorities, partnering with design and product to meet user experience goals.
- Defined APIs and service structure with dependent engineering teams.

- Oversaw technical designs for coding standards, scalability, and maintainability.
- Ran agile processes that improved team efficiency and communication.
- Mentored engineers and supported their professional growth, including interviewing and hiring.

Front End Engineer — Amazon Photos, Amazon Go Store*June 2015 – September 2020*
Amazon | Seattle, WA

- Developed responsive production web applications using React, HTML, CSS, JavaScript, and Java.
- Built and worked within design/component library systems, implementing reusable UI patterns for a consistent user experience.
- Worked daily with UI designers and product managers to align requirements with technical constraints and timelines, and with QA to validate against specs.
- Conducted code reviews and contributed to continuous improvement of processes, tools, and best practices.
- Participated in on-call rotation to quickly mitigate emergent issues and maintain application availability.

Interactive Developer*April 2012 – December 2014*
Nordstrom | Seattle, WA

Web Designer*2010 – 2012*
Fairhaven Health | Redmond, WA

SKILLS

- **AI-native development:** Claude Code, AI-assisted prototyping, spec-driven development
- **Engineering:** React, TypeScript, JavaScript, HTML, CSS, Java; design/component library systems
- **Toolchain:** Version control, code review, on-call and production support
- **Product & delivery:** Roadmap prioritization, requirements to specs, Agile/Scrum, stakeholder alignment
- **Leadership:** Mentoring, hiring, collaboration with PM, Design, QA, and ML
